Asking the MCP server in plain language: example requests that work

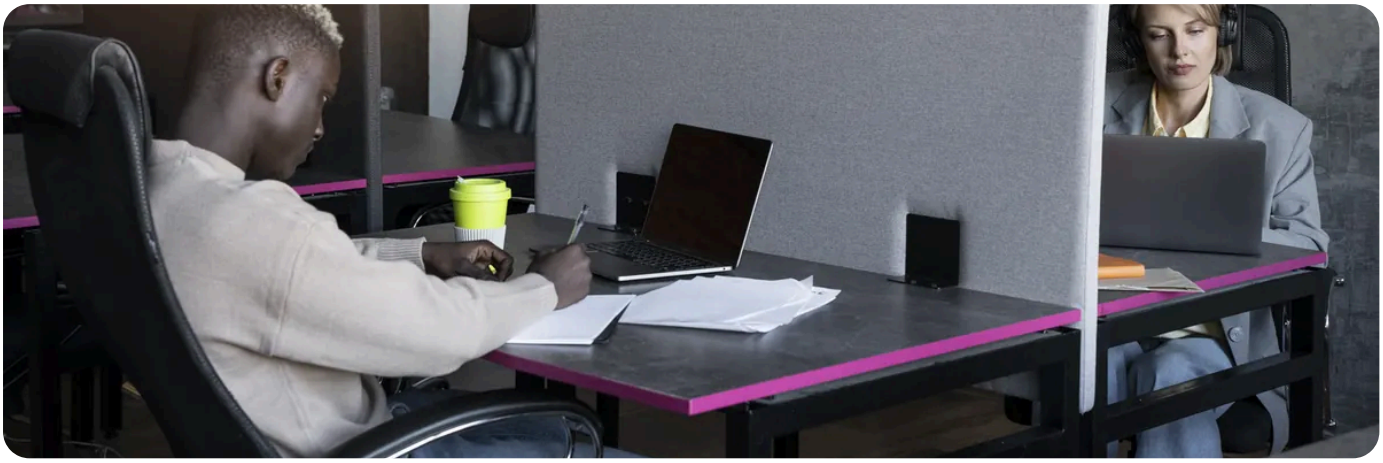
MCP Server Created on **November 28, 2026** 2 min read



With the MCP server set up, write to the agent as you would write to a person. The agent picks the tool, sends the request and shows you the result. Here are requests that work, by type, and what the agent does with each one.

Finding out what there is and what it costs

Request	What the agent does
"Which video models do you have and how much does each second cost?"	It uses `list_models` with the `video` type.
"How many AI credits do I have left?"	It uses `get_balance`.

Images

Request	What the agent does
"Generate a square image of a modern office with plants and morning light, and save it to `public/img/hero.png`."	It uses `generate_image` and saves the file in the project.

Video and voice

Request	What the agent does
"Make a 5-second 720p video of a drone flying over a city at sunset."	It uses `generate_video`, with the length and resolution in `options`.
"Animate this image for 5 seconds: `https://www.example.com/photo.jpg`"	It uses `generate_video` with the image in `image_url`.

Request	What the agent does
"Read this text aloud and save the audio to `audio/welcome.mp3` : Thank you for contacting us."	It uses `generate_audio` and saves the file.
"Check if the video is ready."	It uses `get_generation` with the id it got earlier.

Another model

Request	What the agent does
"Ask `deepseek-ai/deepseek-v4-flash` how to sum up this error in one sentence."	It uses `chat` with that model.

If your agent has its own web search, and you want the MCP server one, say so: "use `web_search` ". Each search costs 0.5 credits.

For a request that comes out right

Say the format you want: square, 5 seconds, 720p. Say where to save the file, because the links to the files are not permanent. To choose a model, give the name or the id shown by `list_models` . Without a model, we use a default one of ours, good and cheap. Before a long video, ask for the price and the balance first.

Do not ask for a video again just because it is taking long.
The generation keeps running on the server even if the agent stops waiting, and it is charged when it finishes. Ask "check if the video is ready" instead.

For tips on describing images well, see **asking AI for an image**.

RECOMMENDED

Want to ask your agent for images, videos and voice? See the Coding with AI page.
