Cursor Tab and your own key: only the chat uses All in One AI models

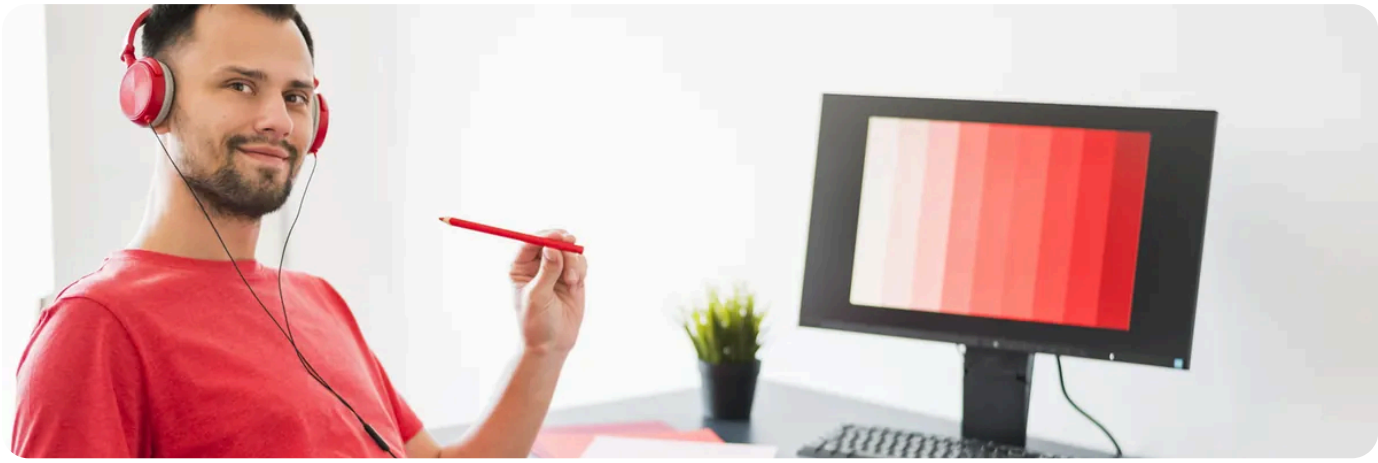
Cursor Created on **November 28, 2026** 2 min read



Cursor uses AI in two ways: in the chat, where you talk to the model and ask it for changes, and in Tab, which suggests the next code as you type. With your Interweb key, only the chat uses All in One AI models.

What Cursor says

Cursor's help page on your own keys says custom API keys only work with chat models and that Tab keeps using Cursor's own models.

In Cursor	Which model it uses	Who pays
Chat (the model picked in the selector)	The All in One AI model you added under **Add Custom Model**	AI credits or Coding Plan points, at Interweb
Tab (suggestions as you type)	Cursor's models	Whatever your Cursor plan covers

What this means for you

1. Tab does not spend AI credits or Coding Plan points, and it does not show in your All in One AI History.
2. Each chat message is a request to our API and shows in History, with the key you used.
3. For Tab, the rules and limits of your Cursor plan apply.

What if you want everything on our models?

Cursor cannot do that: Tab always stays on its own models. If you want every AI request to go to the model you chose, use a tool that sends everything to the configured model, such as Cline in VS Code or a terminal tool. See **which tool to choose**.

To pick another chat model, use the selector. Only the models you added show there: see **how to add more models in Cursor**.

RECOMMENDED

Want our models in Cursor? Visit the Coding with AI page.
