The short answer: both panels on our Streaming Server give you a **ready-made player to copy** into your website. **SonicPanel** has **HTML player templates**, a **custom player with your radio's image** and a **"live DJ" widget**. **VoxStream** has **several player designs** and a **cross-platform app**. You pick the design in the panel, copy the code and paste it into a page. The player does not limit your audience: on every plan, simultaneous listeners are unlimited.

What each panel offers to reach your listeners

Option	SonicPanel	VoxStream
A player to paste into your site	HTML player templates, ready to copy.	Several player designs, ready to copy.
A player that looks like your station	Custom player with your radio's image.	Check in the panel which designs let you add your own image.
Who is on air right now	"Live DJ" widget for your website.	Not on this panel's feature list: ask us if you need it.
Listening on a phone	The listen link opens in the browser and in any player that accepts a stream address.	Cross-platform app, as well as the listen link.
An Android app with your station's name	Paid add-on on the Pro and Plus plans, included on Ultra.	Paid add-on on the Pro and Plus plans, included on Ultra.
A ready-made radio website (Web Radio Site)	Paid add-on on the Pro and Plus plans, included on Ultra.	Paid add-on on the Pro and Plus plans, included on Ultra.

Putting the player on a page of your site

1

Sign in to your radio panel with the address, username and password from the e-mail you received when we set up your station. If you have not done that yet, start with **the first steps with SonicPanel**.

2

Find the players section (the menu name changes with the panel version and language: "Players", "HTML Player", "Widgets"). Choose the design, the colours and, on SonicPanel, your radio's image.

3

Copy the code the panel generates. It is usually a short block of HTML or an **iframe**.

4

Paste it into your site. In WordPress, use a **Custom HTML** block on the page or in the sidebar: see **creating and editing pages in WordPress**. In other site builders, look for the option to insert code or HTML.

5

Publish and test on a computer and on a phone, ideally on another network (mobile data will do). Press play and check that the sound comes through and the song title shows, if the design displays it.

6

Add the direct listen link too (it is in the e-mail), for people who prefer to open the station in their own audio player.

Your site uses https and the player will not play? Browsers block or warn when a secure page loads sound from an “http” address. The SSL certificate is included with the Streaming Server: use the **https** address the panel gives you in the player. If the padlock on your site disappears because of the player, see **mixed content after moving to HTTPS**.

Do not make the radio start by itself when the page opens. Browsers usually block sound that plays automatically until the visitor clicks, and people caught by surprise close the page. A clear play button works better.

Player not showing, not playing or showing the wrong station? Open a support ticket in Meu Interweb with the address of the page where you pasted it and the panel you use.
