How to set up your e-mail on iPhone or iPad

E-mail Created on **August 14, 2026** Updated on **October 4, 2026** 1 min read

The Mail app on iPhone and iPad can hold your professional e-mail alongside any personal accounts, each syncing independently.

Setting it up

1. Open **Settings** → **Mail** → **Accounts**.
2. Tap **Add Account** → **Other** → **Add Mail Account**.
3. Fill in your name, full e-mail address, password and a description (e.g. "Work"), then tap **Next**.
4. Choose **IMAP** at the top (recommended over POP - it keeps mail in sync if you also check it elsewhere).
5. Under both **Incoming Mail Server** and **Outgoing Mail Server**, fill in the host, and repeat your e-mail and password in the user fields - the outgoing fields are marked "Optional" on iOS, but leaving them blank stops sending from working.

Setting	Incoming (IMAP)	Outgoing (SMTP)
Server	**mail.yourdomain.co.mz** - replace with your own domain	
Port	**993**	**465**
Security	SSL/TLS	SSL/TLS

Username: your full e-mail address - **Password:** the mailbox password you set in cPanel (not your portal or cPanel password).

6 Tap **Next**, wait for verification, then **Save**.

If verification fails,
double-check the outgoing username and password were filled in - that's the single most common cause on iOS.

NEED A HAND?

Verification keeps failing? Send us a screenshot and we'll take a look.
