Why does my SSL certificate show fewer than 365 days?

Security Created on **August 14, 2026** Updated on **October 21, 2026** 2 min read

If you're on the free SSL every account gets by default, this doesn't apply to you - skip to the note below. This is only relevant if you purchased a paid SSL certificate.

Free SSL (AutoSSL / Let's Encrypt) - nothing to do

This is the default for every domain.
Let's Encrypt certificates are valid for about 90 days and renew automatically roughly every 60 days - you will never see a countdown or need to act on it.

Paid SSL certificates (RapidSSL, GeoTrust QuickSSL...)

Certificate authorities cap how long a certificate can run without reissuing it - industry-wide rules have shortened this over the years, so a 1-year purchase is often issued in a shorter block (commonly under 200 days) and then reissued, at no extra cost, for the rest of the period you paid for. This is not a fault or a mistake on the certificate - it's how the certificate authority itself requires it to work.

Reissuing it

1. Log in to **My Interweb** and open **My Products & Services**.
2. Select the SSL certificate product and look for **Manage** / **SSL Tool**.
3. Follow the on-screen steps to reissue - it's self-service and included in the certificate you already purchased, no new payment involved.

If the self-service option isn't showing,
or the reissue fails, open a **support** ticket rather than letting the certificate lapse - an expired certificate shows a browser warning to every visitor.

NEED A HAND?

Reissue not going through? We'll sort it out with you.
