How to add another domain or a subdomain

cPanel & WHM Created on **August 16, 2026** Updated on **October 4, 2026** 2 min read

The same hosting account can serve more than one site. There are two different things you may want, and they are not the same:

1. **Addon domain** - a second, completely separate domain (*anothersite.co.mz*) with its own site, in the same account.
2. **Subdomain** - a branch of a domain you already have (*shop.yourdomain.co.mz*), no new registration needed.

Adding an addon domain

1. Register or transfer the domain first - it has to exist before it can be added.
2. In cPanel, open **Domains** and click **Create A New Domain**.
3. Type the domain. cPanel suggests a folder inside your account; accept it or choose another.
4. Point the new domain's nameservers to your hosting - see **how to configure a domain's DNS**. Without this the domain won't reach the account.

Creating a subdomain

1. In cPanel → **Domains**, click **Create A New Domain** and type the full name, e.g. *shop.yourdomain.co.mz*.

2 cPanel recognises it as a subdomain of a domain you already have and creates it right away - no DNS change and no extra cost.

How many can I add?

It depends on your plan. In cPanel, the right-hand panel shows your limits for *Addon Domains* and *Subdomains* - "unlimited" or a number. If you've hit the limit, an **upgrade** raises it.

Each domain has its own SSL.

A newly added domain gets its free certificate automatically, but that can take a few minutes to an hour. Until then the browser may warn about the connection - it resolves on its own.

NEED A HAND?

Domain added but the site doesn't open? We'll check the pointing.

DOMAIN REGISTRATION

Is the name you have in mind still free?

Type it here and find out in a second. DNS management included in the panel, renewal notices well ahead of time, and the domain registered in your name - never in ours.

Search domain →

.co.mz **.org.mz** **.net.mz** **.com** and over 100 extensions
